Existing Methods

- ✓ Manual crop inspection → Time-consuming
- ✓ Image-based disease apps → Mostly detect existing symptoms
- ✓ Weather apps → Do not provide crop-specific disease risk
- ✓ Expert consultation → Limited availability
- ✓ No integrated system for Detection + Prediction + Alert + Recommendation

SANTHIRAM ENGINEERING COLLEGE

(AUTONOMOUS)

Accredited by NAAC 'A' Grade, Accredited by NBA - (B.Tech-ECE & CSE)

PROBLEM STATEMENT

SMART INDIA HACKATHON 2026

The North Eastern Region (NER) is highly vulnerable to landslides due to heavy rainfall, steep slopes and unstable terrain.

- Existing monitoring systems are often reactive and may not provide timely warnings.
- Rainfall, soil, terrain and satellite data are scattered across different sources.
- Remote areas face connectivity and communication challenges.
- Late warnings can lead to loss of lives, road blockages and infrastructure damage.
- There is a need for an AI-based system that can predict landslide risk early and provide timely alerts.
